

CRITIQUE INTELLIGENCE SYSTEM

A source-linked architecture for turning live or simulated design-review audio into evidence, alternatives, decisions, actions, and revision rationale.

HOW TO READ THIS DOCUMENT

Green is implemented in the repository. Blue is the next product boundary. Amber marks decisions that remain human-authoritative. Red names a risk or evidence gate. Purple marks market logic, not validated demand.

MAP OF VARIATIONS

- A

System spine
end-to-end value and authority
- B

Signal compiler
audio-to-critique extraction contract
- C

Live sequence
fast/slow lanes, latency and recovery
- D

Critique ledger
project memory and artifact revision
- E

Evaluation twin
simulation, faults and measurable gates
- F

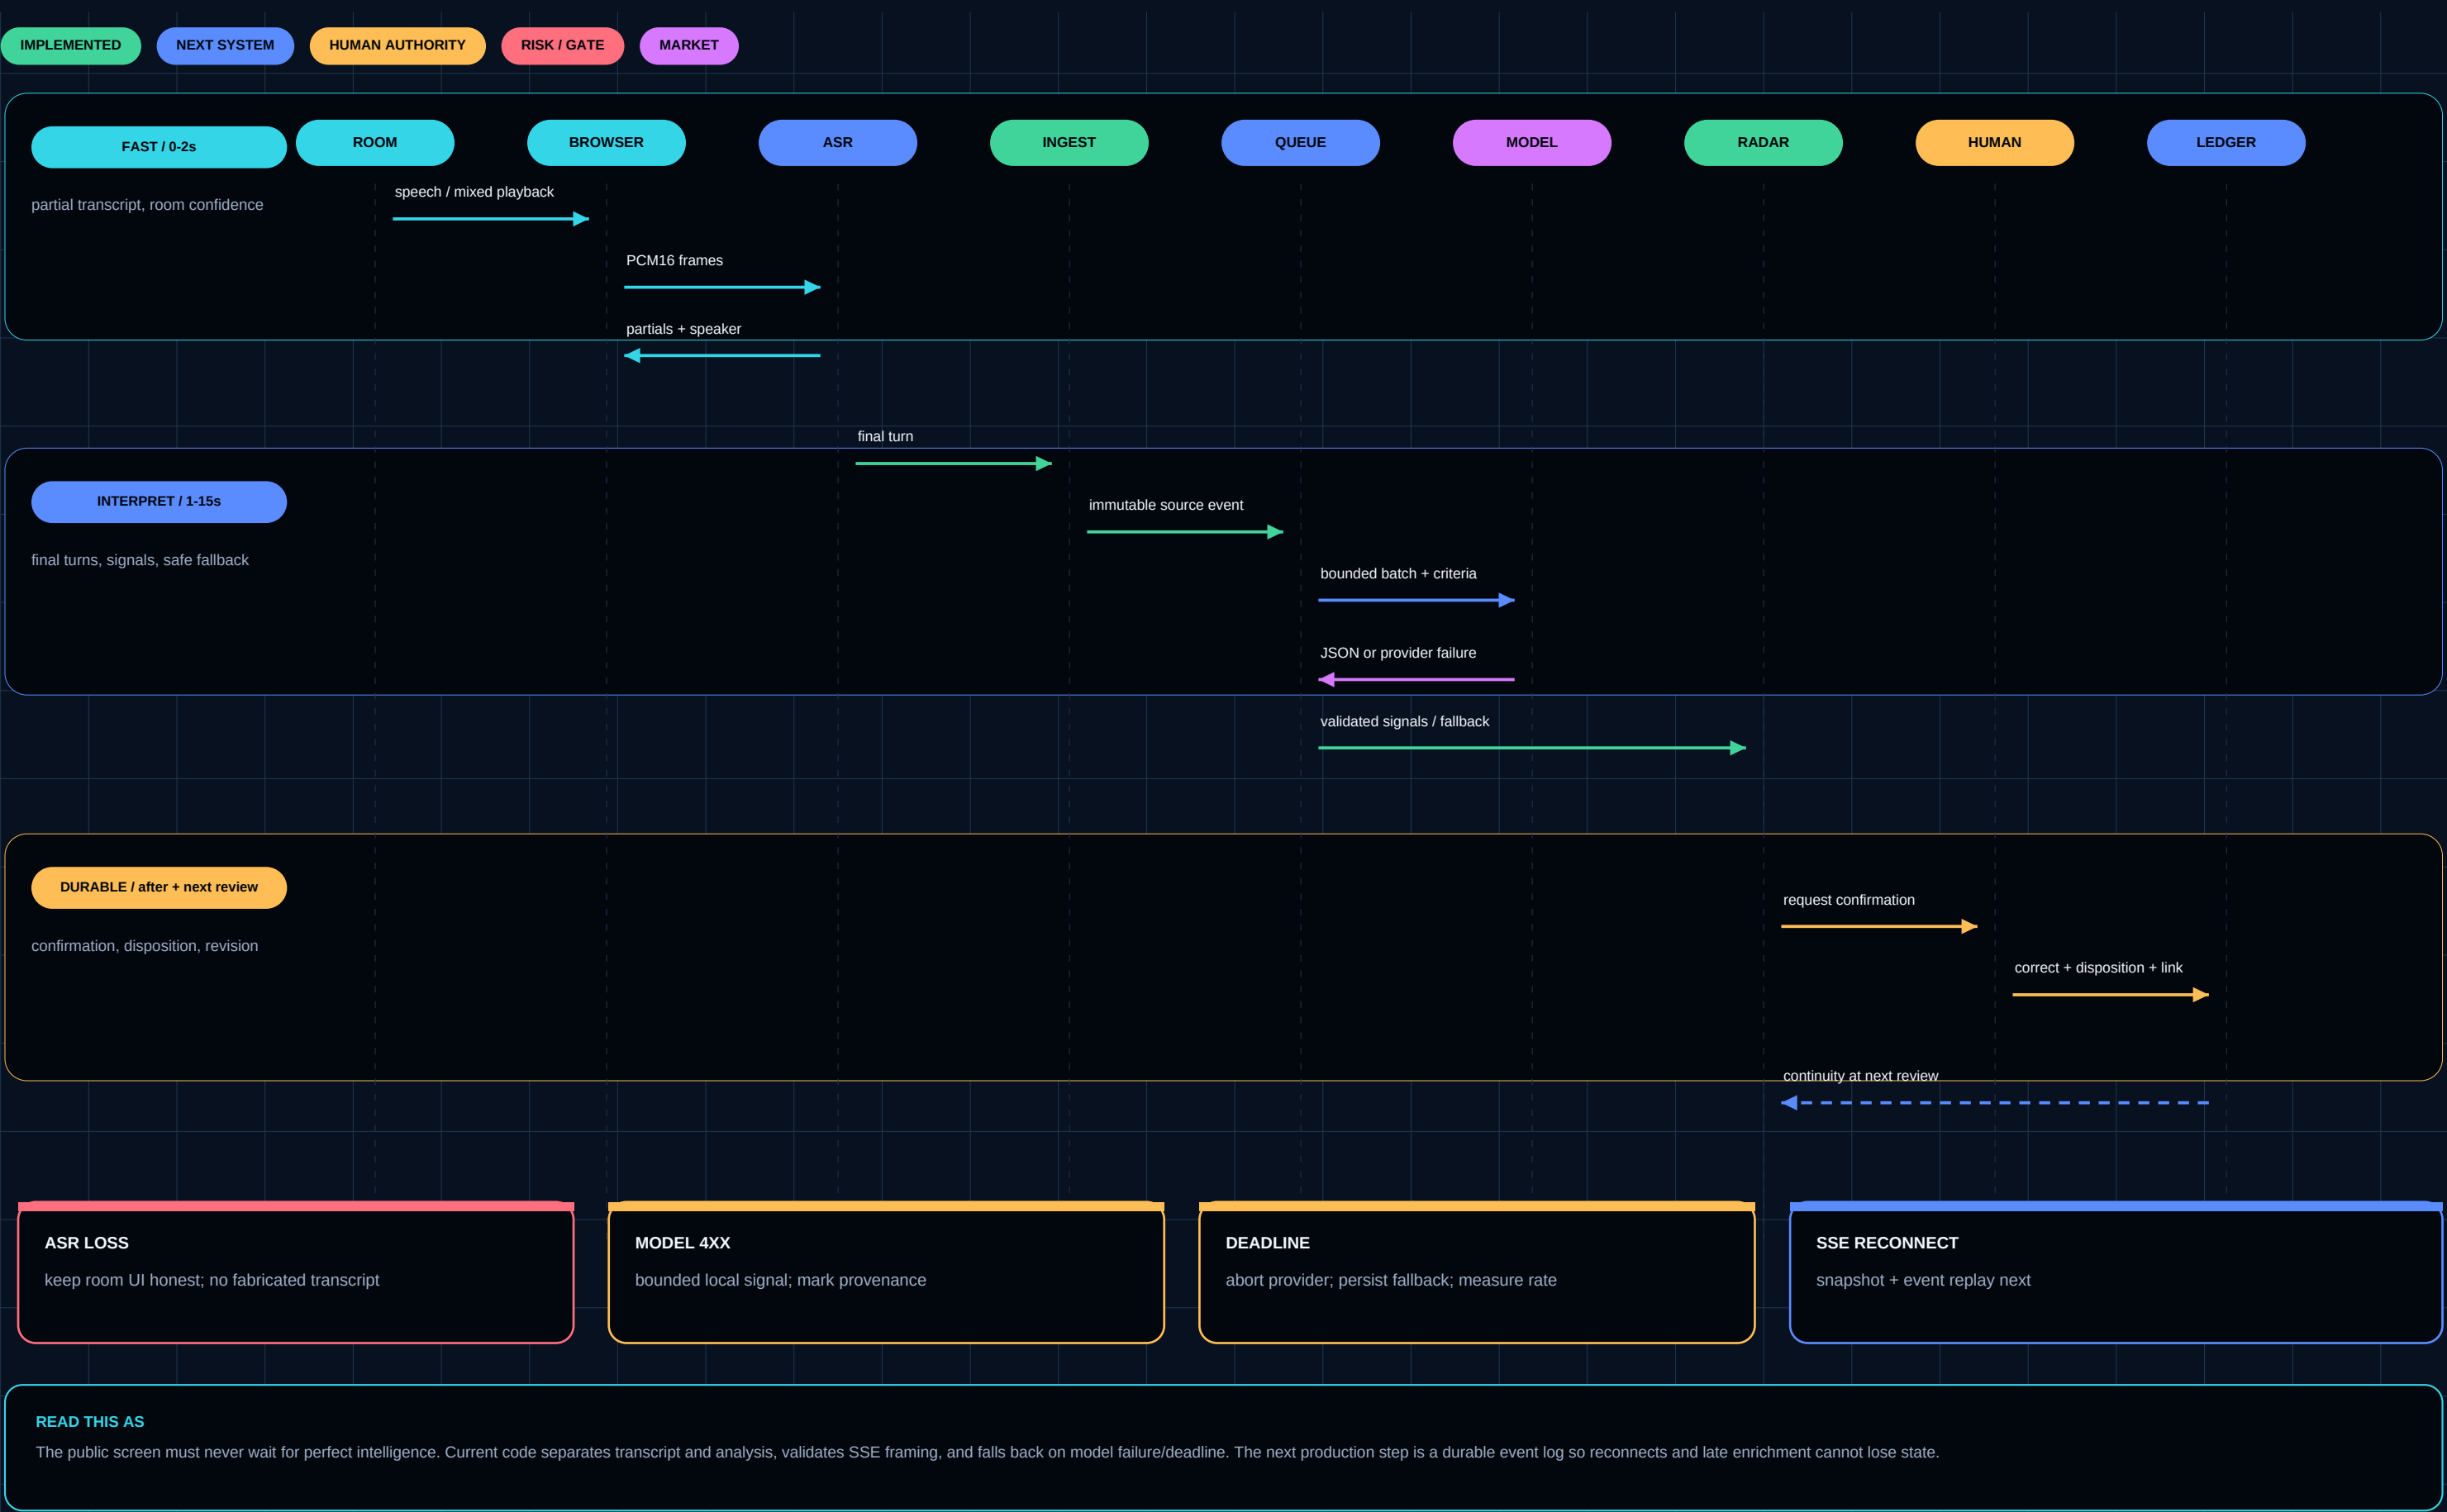

Experience & governance
before/during/after surfaces
- G

Production architecture
trust boundaries and scale path
- H

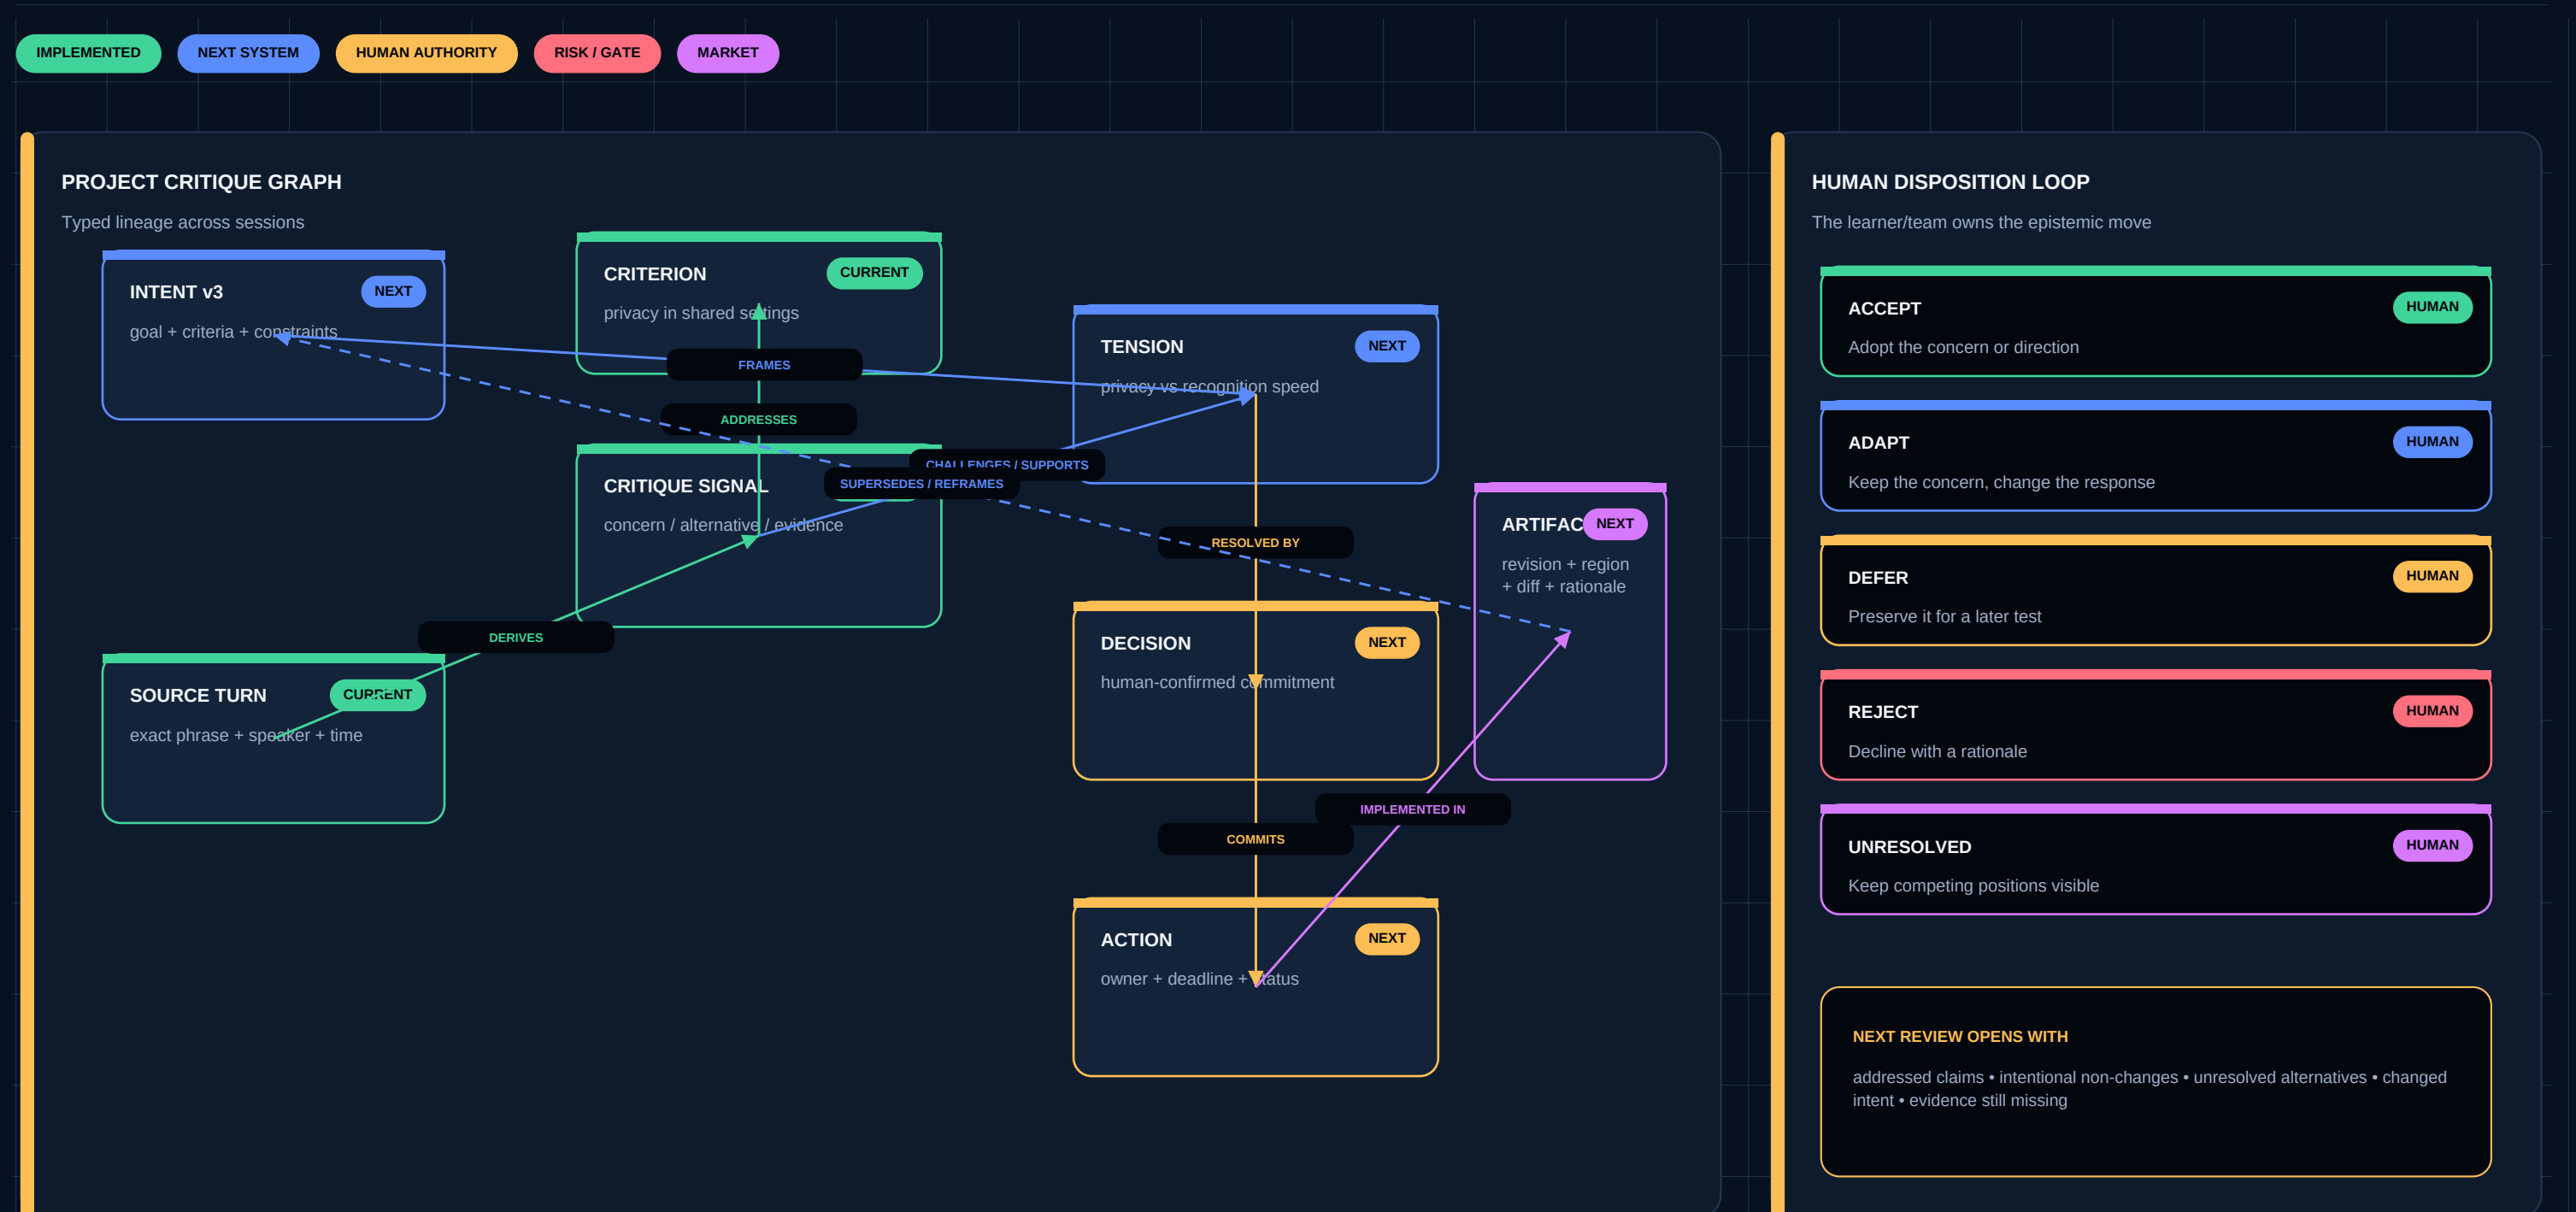

Business wedge
market seam, moat and investor gates

VARIATION A / SYSTEM SPINE

Two clocks, three lanes, one recoverable room

The Critique Ledger: what survives the meeting

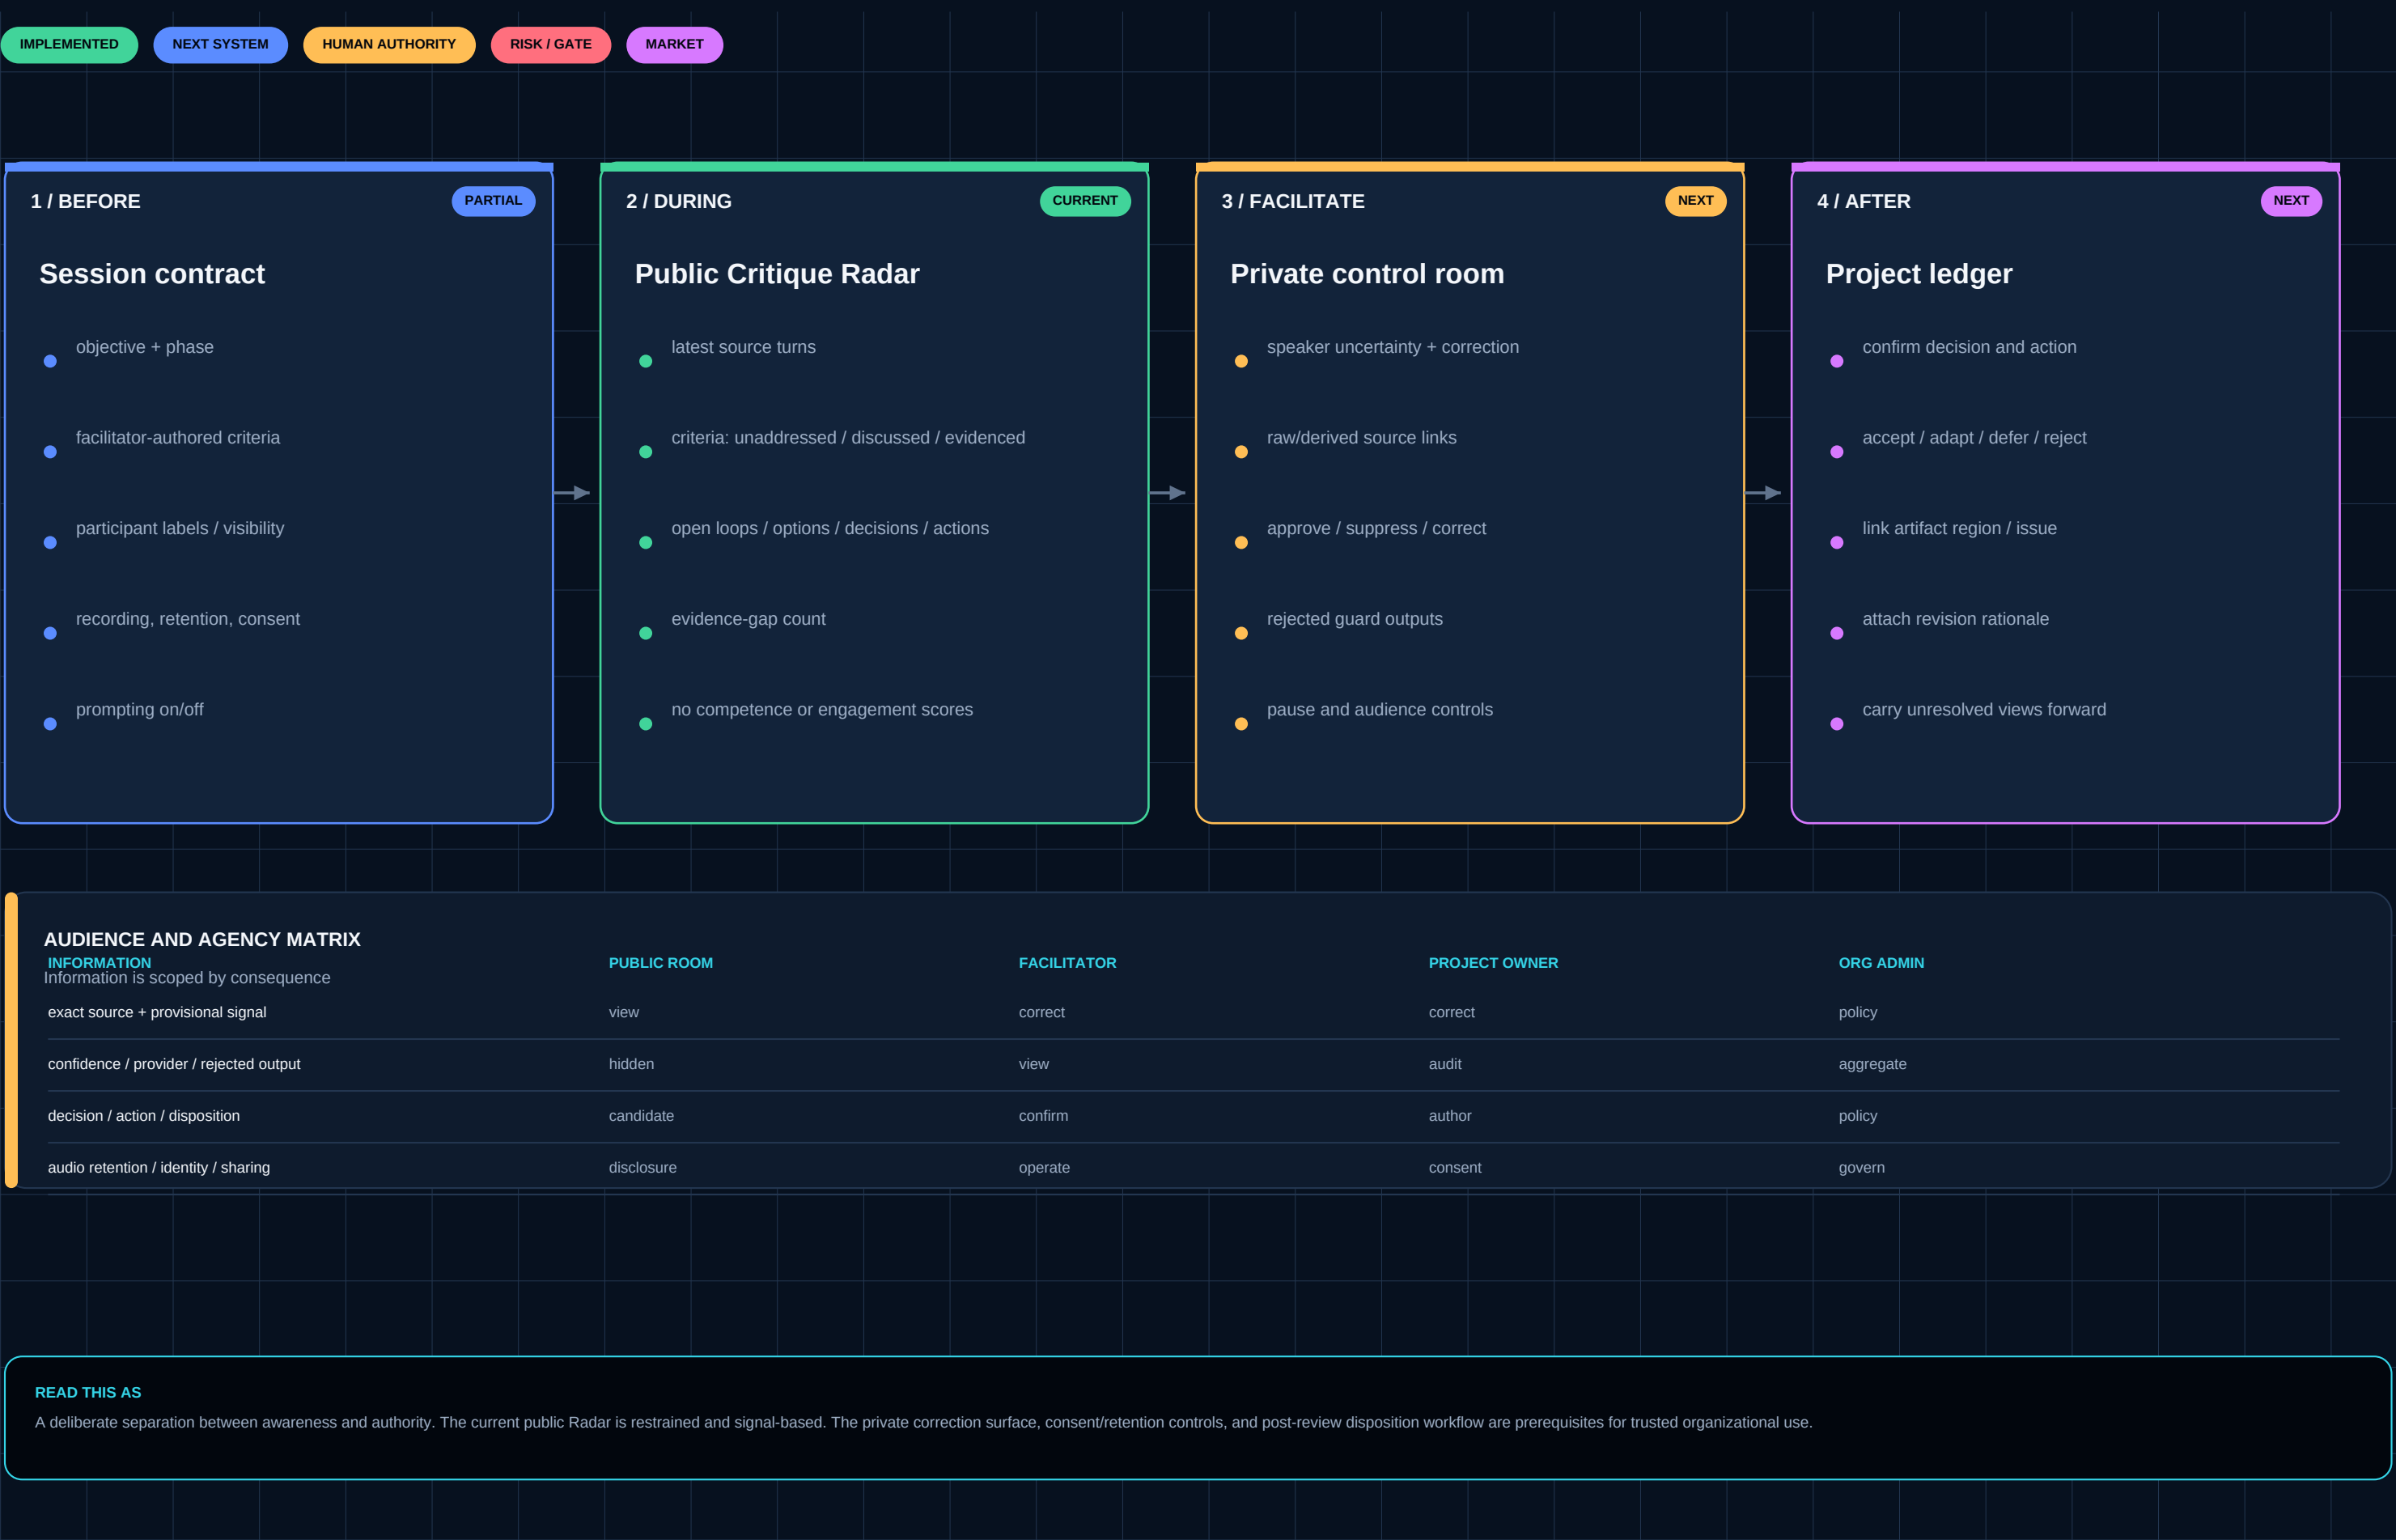

READ THIS AS

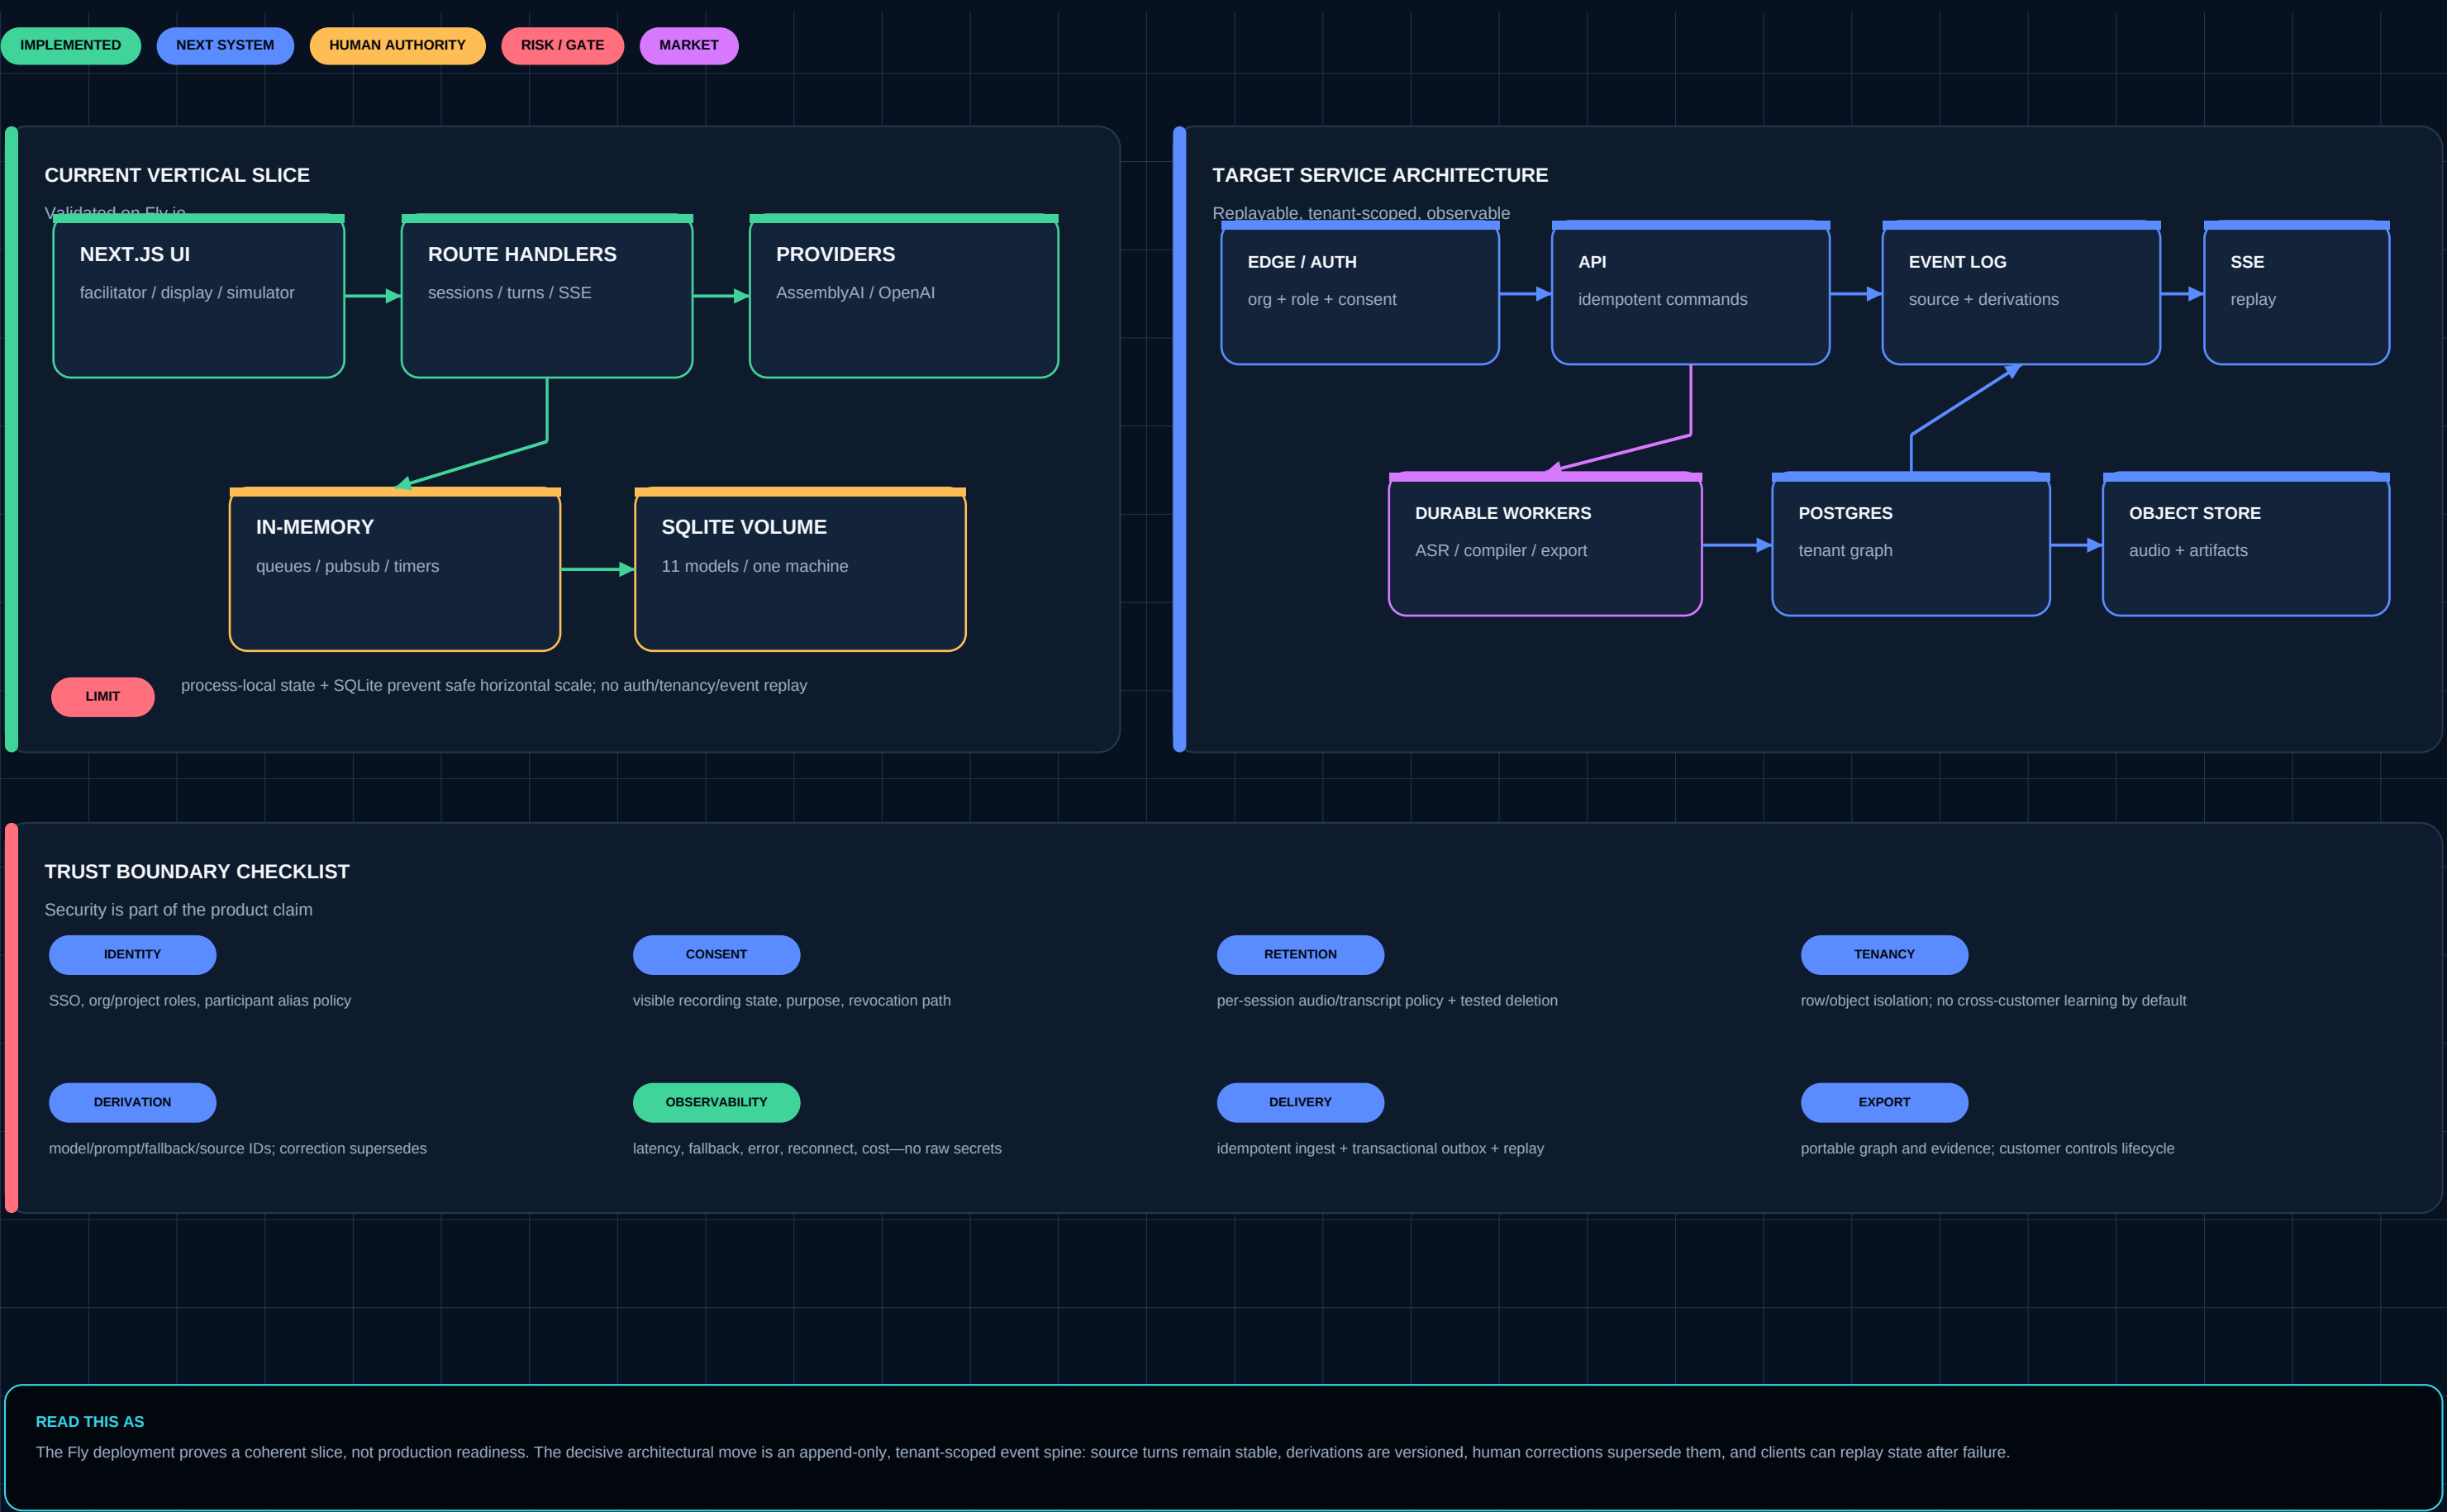

The green source-turn and signal nodes exist today. The investable product requires the amber and purple chain: confirmation, disposition, action ownership, artifact region, revision response, and continuity in the next review.

Four surfaces, one explicit authority budget

From one healthy Fly machine to a replayable service

Promising, not yet investable

IMPLEMENTED

NEXT SYSTEM

HUMAN AUTHORITY

RISK / GATE

MARKET

VERDICT

FUND DISCOVERY, NOT SCALE

The repo demonstrates a safe extraction spine and a differentiated product hypothesis. It does not demonstrate paid retention, natural-review accuracy, artifact workflow pull, or a durable moat.

90-DAY CONTINUE GATES

Proposed management thresholds

6 / 10

teams complete 4+ reviews

> 50%

eligible recurring reviews captured

> 70%

displayed signals have valid exact anchors

< 5%

false 'decision made' claims

< 20s

median correction time

> 40%

important claims linked to action/issue/revision

3+

paid pilots or priced continuations

EVIDENCE BALANCE

FOR

meeting capture and artifact review are paid workflows; provenance matters

AGAINST

incumbents already cover notes, tasks, comments, issues, and evidence repositories

UNKNOWN

whether spoken-critique-to-revision is painful enough to buy separately

READ THIS AS

A falsifiable company thesis: teams will repeatedly pay to preserve evidence, alternatives, decisions, and revision rationale that meeting tools and artifact comments leave disconnected. Every gate above can invalidate that thesis.

What exists, what is proposed, what was verified

MARKET

REPOSITORY CAPABILITY MATRIX

Evidence as of 2026-08-07

CAPABILITY	STATE	REPOSITORY EVIDENCE	VERIFICATION / NEXT GATE
live browser audio -> ASR	CURRENT	facilitator mic + AudioWorklet + AssemblyAI token path	build/E2E; natural-room WER/DER still needed
simulated/injected turns	CURRENT	scenario, run, playback, shared turns route	54 browser-profile cases
acoustic simulation	CURRENT	TTS, mix schedule, WAV/MP3 assets, audio validation	unit audio-pipeline test; expand fault deck
bounded critique signals	CURRENT	critique-intelligence.ts + normalized analysis contract	exact quote/criterion/enum/length tests
Critique Radar over SSE	CURRENT	display page + initial snapshot + intelligence patch	public Fly screenshot and source-linked probe
provider-safe degradation	CURRENT	4XX fallback + configurable deadline abort/fallback	public 13.5s deadline-safe probe
human signal correction	NEXT	not implemented	median correction time < 20s
disposition + artifact link	NEXT	not implemented	> 40% important claims linked
durable replay + tenancy	NEXT	SQLite + in-memory state today	Postgres/outbox/object store/auth/deletion tests

TEST AND DEPLOYMENT SNAPSHOT

UNIT

91 / 91 passing at diagram phase

BROWSER

54 / 54 across Chromium, Firefox, WebKit, phones, tablet

TYPE / BUILD

TypeScript clean; 19-route-entry Next production build

FLY

machine healthy; public Critique Radar inspected

PUBLIC PROBE

exact quotes persisted through provider 4XX and deadline

PACKAGE AUDIT

3 high transitive findings remain; Next major migration gate

CURRENT MARKET EVIDENCE

- Microsoft Teams Facilitator — live notes, decisions, tasks, in-person mobile
- Read / Granola / Fathom — commodity feature and price anchors
- Figma / Filestage / Autodesk — artifact review and issue workflow
- Dovetail — source traceability as adjacent trust property
- Figma 2026 report — collaborative decision quality is increasingly salient

SOURCE GUIDE

Detailed links, pricing caveats, investor reasoning, risks, and go/no-go gates are in 06-product-and-investor-assessment.md. Architecture and novelty background remain in 01-05. The PDF source is generate_critique_intelligence_system.py.
