

Live critique audio → source-linked Critique Radar

From Critique Radar to Critique Ledger

90 days to prove the workflow—or stop

The next phase is not more taxonomy or more diagram pages. It is a corrected natural-review benchmark plus one artifact workflow integration used repeatedly by paying design partners.

MILESTONE-BOUND

NO SCALE CLAIM YET

1 / TRUST THE EXTRACTION

Weeks 1–4

- BUILD

show provider/fallback provenance; correct signals; confirm decisions/actions
- DATA

20–30 consented natural reviews with source-anchored gold labels
- MEASURE

signal precision/recall, false-decision rate, p50/p95 latency, correction time
- PASS

≥70% valid anchors; <5% false decisions; median correction <20s

2 / CLOSE ONE WORKFLOW

Weeks 3–8

- BUILD

disposition + Figma region + Linear/Jira issue + revision response
- PILOT

6–10 product-design teams; four recurring reviews each
- MEASURE

capture rate, confirmed claims, revision-link rate, human touches
- PASS

≥50% eligible reviews captured; ≥40% important claims linked

3 / MAKE IT OPERABLE

Weeks 6–12

- BUILD

auth/tenant roles, retention/deletion, Postgres event log, durable worker
- FIX

Next.js major security migration; package audit; replay and idempotency
- MEASURE

fallback, reconnect loss, deletion completion, cost/review
- PASS

3 paid pilots or priced continuations; no cross-tenant/state-loss defect

EVIDENCE ALREADY IN HAND

Useful proof, not market validation

- 93 / 93

unit tests
- 54 / 54

browser/device cases
- 19

Next route entries built
- v27

Fly machine healthy
- 12.1s

real-model public signal result
- 3

high package findings remain

STOP CONDITIONS

What would invalidate the company thesis

- KILL 1

teams export summaries but ignore the graph
- KILL 2

disposition/revision linking feels like clerical work
- KILL 3

usage requires founder facilitation
- KILL 4

buyers will only pay generic-notetaker prices

DECISION

Proceed with paid design-partner discovery; do not launch as a broad meeting assistant.

The business becomes credible only when teams repeatedly use the critique-to-revision chain without researcher prompting.
